

Rail Mount Level Instructions

Thank you for purchasing our product, and make sure to check back for new products, both printed and CNC machined from aluminum.

Installation of this level is quick and easy. Loosen the two halves, and install with the bolt in a slot on your picatinny rail. For a right-handed shooter, you would typically have the level vial on the left side of the rifle and vice versa for lefties. Hand tighten to secure, approximately 5 in-lbs of torque is sufficient. The level can be slightly adjusted by increasing or decreasing torque on the bolt to flex the vial housing. **DO NOT OVERTIGHTEN as failure can occur. Go shoot! Now you know your rifle is level.**
